

Lab on ST data processing

1. Download data “Visium_Human_Breast_Cancer_filtered_feature_bc_matrix.h5ad” from ispace
2. Install python package scanpy
3. Load the data into python workspace by

```
adata=scanpy.read_h5ad(“Visium_Human_Breast_Cancer_filtered_feature_bc_matrix.h5ad”)
```

4. Print the size of :

1. adata.X
2. adata.var[‘gene_ids’]
3. adata.obs[‘in_tissue’]
4. adata.obsm[‘spatial’]

5. Follow the instruction in

<https://scanpy-tutorials.readthedocs.io/en/latest/spatial/basic-analysis.html>

To do QC and preprocessing and visualisation to the Human_Breast_Cancer data.

6. Get the screenshot of your print out and visualization.
